ABOUT URLBOX

Frequently Asked Questions

If anything's not clear we're here to help. Email via support@urlbox.com or use the [chat widget](#) in the bottom right corner. We'll try to get back to you within a few minutes and you'll always hear back from us within one working day.

What counts as a Successful Render?

Unlike other APIs we don't charge for requests that fail for any reason. This happens when a web page is unavailable or the combination of options sent to us is not valid. A Successful Render is one that results in an image being returned to you.

Do you cache screenshots?

Yes, we cache screenshots for 30 days when generated with Render Links. You can override this setting via the TTL parameter or use the force option to override a previously cached screenshot.

Do requests to cached screenshots count against the monthly quota on the plan?

No. Only screenshots that are being rendered for the first time or via our REST API count against the quota.

What happens if I go over my quota?

No need to worry - we won't cut off your service. We'll automatically upgrade you to the next tier and you benefit from volume pricing. See the pricing page for more details.

Do you send alerts when I am breaching or close to going over my monthly quota of screenshots?

We sure do. We will send you an email when you are at 80%, 90%, and 100% usage.

Are my credit card details safe?

Yes. We never store or transmit your credit card details to our servers. We outsource all of the payment and subscription handling to our payment processor, Stripe.

Do you offer Service Level Agreements / guarantees for uptime and screenshot processing time?

Yes. Please get in touch to discuss our Business or Enterprise plans

Why don't you offer a free plan?

We primarily serve revenue generating businesses ranging from single freelancers, bloggers and startups all the way to established businesses and enterprises. These customers depend on us to continue operating sustainably as we have done for over a decade.

I really want to use you guys, but I just can't afford the service right now!

We've worked to make our plans as affordable as possible while keeping our business sustainable. The annual Lo-Fi plan works out at just over \$4/month. If that doesn't work for you, please get in touch to tell us about your project. We'll see if we can work something out.

Where do screenshots get stored?

We use Google Cloud Storage to store screenshot images. If you're on the Hi-Fi plan or above, you can choose to save screenshots to your own Amazon S3 bucket. The Ultra plan and above supports any S3-compatible storage provider.

Your service sucks - I want my money back!

We will work with you to ensure our product meets your needs. Please help us make it better by letting us know what we can do to improve. If you're still not satisfied after 30 days you can have your money back.

Do you send alerts when I am breaching or close to going over my monthly quota of screenshots?

We sure do. We will send you an email when you are at 80%, 90%, and 100% usage.

Are my credit card details safe?

Yes. We never store or transmit your credit card details to our servers. We outsource all of the payment and subscription handling to our payment processor, Stripe.

Do you offer any support?

Of course! Feel free to try our first-class service out. We generally respond to any queries via email within the same day, and we aim to resolve issues within 3 working days.

on the Hi-Fi plan or above, you can choose to save screenshots to your own Amazon S3 bucket. The Ultra plan and above supports any S3-compatible storage provider.

Your service sucks - I want my money back!

We will work with you to ensure our product meets your needs. Please help us make it better by letting us know what we can do to improve. If you're still not satisfied after 30 days you can have your money back.

How do I cancel my subscription?

It's easy to cancel - just log in to the dashboard to cancel your subscription. Your account will remain active until your renewal date, and after that you will no longer be charged.

AUTOMATED SCREENSHOTS

We're serious about screenshots

Urlbox has been turning HTML to images and URLs into screenshots since 2012.

Many developer tools have screenshots as a feature. We're focused on providing you with the very best from your first API call. Three things we're committed to that we wish were true of all developer tools:

- ✓ Low commitment to start
- ✓ Predictable pricing as you grow
- ✓ Confidence that you can depend on us at scale

We're profitable, privately owned, and we're in this for the long haul. Our team is based in the UK with strong ties to Leeds, London and Brighton.

"It seemed so simple when we started.

Then we realised we had every page on the web as a possible input. More edge cases than there are dependencies in a node.js project! Every new browser release brings more challenges.

Over 10,000 hours of refinements later, I'm proud of the accuracy of our screenshots."

Chris Roebuck, Founder of Urlbox

OUR TEAM

We're here to help

We relish every opportunity to solve your most challenging screenshot problems. You'll always get straight through to someone who knows a minimum of two programming languages and has 5+ years experience of generating website screenshots.

Available Output Formats

Image

When you want to capture a snapshot of a full or partial page at a specific point in time.

- **PNG:** Even with a transparent background.
- **JPEG:** For photos and general use.
- **WEBP:** For modern browsers and mobile devices.
- **AVIF:** For high-quality images on modern browsers.

Video

When you want to capture an animated website or a video scrolling down a page.

- **MP4:** For general video use.
- **WEBM:** For modern browsers and mobile devices.

Document

When you want to capture a page as if it were printed or you need a vector graphic for a design pipeline.

- **PDF:** For reports, invoices and more.
- **SVG:** For vector graphics.

Data

When you need to capture more context at the same moment as taking a screenshot, recording a video or generating a document.

- **MD:** Extract text content as markdown for LLM inputs.
- **JSON:** Extract structured metadata and more data from pages.
- **HTML:** Get the fully hydrated HTML with dynamically loaded content.

AI-POWERED ANALYSIS

Extract Insights with AI-Powered Screenshot Analysis

Get structured data from visual analysis as if you had your own eyes on the page, not just the underlying code.

Bring your own LLM API Key to get AI responses and consistent structured outputs in a single request. You provide a URL and prompt. Urlbox will combine them with screenshot, text content and metadata to provide context.

Perfect for competitive intelligence, compliance audits, and web automation workflows.

[Learn about structured output support →](#)

AI Prompt Analysis

Analyze screenshots with custom prompts. Extract insights about layouts, visual page components and overall messages of a page.

LLM Structured Outputs

Define JSON schemas for OpenAI or Anthropic to follow. Get predictable, structured responses instead of unstructured text.

WHO CARES?

No One Seems To Take

Inaccurate

Compliance teams flag missing or obscured elements. You

[Learn about structured output support →](#)**WHO CARES?**

No One Seems To Take Screenshots As Seriously As You.

Screenshots might play a critical role in compliance for your business. Maybe they're key to delighting your customers or illustrating your commitment to quality. Done well, screenshots provide a competitive edge in research, reporting and marketing.

You know it's far too easy for screenshots to go wrong in every case.

[Try Urlbox instead](#)[Discover all features →](#) **Inconsistent**

Researchers and analysts worry about distracting ads, banners, widgets and popups. They'll need to revisit every web page to have any confidence in their insights.

 **Insecure**

Security teams raise concerns about data privacy and retention. No one is confident about where and when screenshots are being taken, how they are stored or for how long.

 **Inaccurate**

Compliance teams flag missing or obscured elements. You painstakingly re-do every single screenshot to gain credibility with auditors.

 **Ugly**

Designers wince at blocky fonts and layout misalignments. Screenshots look like someone hit print screen in Windows 95 just before a blue screen of death.

 **Unengaging**

Marketers hold back from sharing content on the channels they could. The auto-generated images they have just don't have the edge they used to have.

 **Inflexible**

Engineering teams complain about the lack of control. 'Simple' rendering errors go unfixed for months, services go down for hours with no explanation.

 **Unsupported**

Customers, and everyone else, badger you with screenshot issues. You wait days for support from vendors who spend less time thinking about screenshots than your accountant.

“It's so evident that Urlbox really cares and pays attention.”

Mike Schauer, Founder Swiped.co

SERIOUS ABOUT SCREENSHOTS

Imagine If You Had A Team 100% Focused On Screenshots.

You could focus on your core business and leave screenshots to the experts.

[Try for free](#)[Discover all features →](#) **Flawless**

Auditors are so impressed they recommend your company's approach to screenshots to their lawyers.

 **Beautiful**

Designers confidently use the screenshots for entries into design awards.

[Discover all features](#) →

✓ Predictable

Every week clients rave about the new insights researchers and analysts are presenting in visually stunning reports.

✓ Robust

Penetration testers report the team's approach to screenshots actually improves the company's security posture.

✓ Flawless

Auditors are so impressed they recommend your company's approach to screenshots to their lawyers.

✓ Beautiful

Designers confidently use the screenshots for entries into design awards.

✓ Inspiring

The sales team praises the marketing team for their ability to personalise and repurpose so much great content.

✓ Comprehensive

Every time an engineer discovers a new screenshotting edge case, they learn there's a ready to use solution for it.

✓ Proactive

Every month you hear about improvements to screenshots before anyone raises any issues with you.

“When I have a new feature request, I email support and get a response saying it's already possible - within minutes.”

Rutger Tolenaar, Founder ReviewTycoon

AUTOMATED SCREENSHOTS

The Web's Screenshot Automation Platform

Automatically take screenshots like your designer at a Mac.

Repurpose web designs you have into images, PDFs, and more. Generate thousands of unique visual assets in minutes with no code. Retain data and insights hidden from view.

Take accurate screenshots for maximum credibility.

[Give CaptureDeck a Try](#)

 No credit card required.

 **Flawless**

Every screenshot includes exactly what you want. They even save a note with extra context just in case. Title, date, time, full text content and more.

 **Beautiful**

Attention to detail like a world class web designer. Every screenshot is gorgeous.

 **Effortless**

300 now seems so trivial to get right. You're considering doing 30,000 per month.

 **Proactive**

Sometimes perfection is subjective. You're informed when a screenshot might not quite be right.

**Research**

Gather rich, credible data from across the web.

**Compliance**

Verify content and archive it with confidence.

**Analysis**

Find the insights you need to make informed decisions.

**Content Production**

Generate and convert flawless assets at scale.

METICULOUSLY CAPTURE EVERY DETAIL

What You See is What We Render

If a page isn't obscured when you take a manual screenshot, it shouldn't be obscured when we capture it for you.

**Auto-Accept Cookies**

Click those pesky banners away so you don't have to.

**Block Ads & Popups**

Remove ugly distractions you're not interested in.

**Webfonts & Emoji**

Render glyphs as the typographer intended.

**Video**

Capture animations as users were meant to experience them.

**Data**

Save metadata and more along with the full text of a page.

INPUT & OUTPUT FORMATS

URL or HTML to What You Need

Eleven different output formats to capture or convert webpages.

[See detailed guides →](#)

Available Output Formats

Image

When you want to capture a snapshot of a full or partial page at a specific point in time.

- **PNG:** Even with a transparent background.
- **AVIF:** For high-quality images on modern browsers.

Video

When you want to capture an animated website or a video scrolling down a page.

- **MP4:** For general video use.
- **WEBM:** For modern browsers and

Document

When you want to capture a page as if it were printed or you need a vector graphic for a design pipeline.

- **PDF:** For reports, invoices and more.
- **SVG:** For vector graphics.

Data

When you need to capture more context at the same moment as taking a screenshot, recording a video or generating a document.

- **MD:** Extract text content as markdown
- **HTML:** Get the fully hydrated HTML with dynamically loaded content.

★★★★★ "API is so straightforward" ★★★★★ "accurately capture HTML5" ★★★★★ "scaled our volume 5x" ★★★★★ "VERY FAR ahead"

WEBSITE SCREENSHOT API

The Screenshot API You Can Depend On

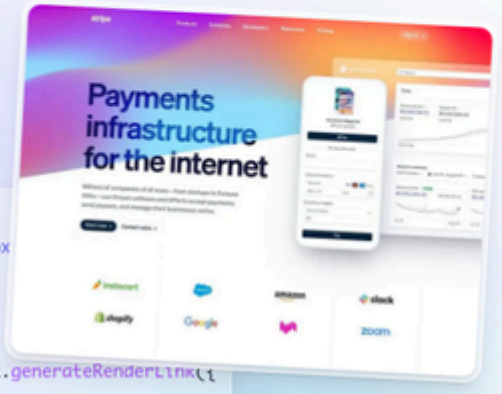

Haunted by headless browser hacks? Urlbox improves your security posture and helps on-call engineers sleep soundly.

- ✓ URL to PNG with hydrated HTML, markdown and metadata
- ✓ 100+ browser rendering options that put accuracy first
- ✓ HTML, SVG, CSS & JS to flawless image, PDF or video

Try for free Book a demo

7 day free trial. No credit card required.

```
import Urlbox from 'urlbox'
const urlbox = Urlbox(
  URLBOX_API_KEY,
  URLBOX_API_SECRET
)
const renderLink = urlbox.generateRenderLink({
  url: 'stripe.com',
  width: 1440,
  height: 840
})
return <img src={renderLink} />
```

Over 700 active customers capturing the web for research, compliance, design, and more:

Customer stories →

HOW HARD COULD IT BE?

Your Team Already Built A Screenshot API Microservice.

Headless Chrome with Selenium, Puppeteer or Playwright on AWS Lambda, Google Cloud Run or Cloudflare Workers. Maybe simply PhantomJS on your own bare metal server. You hoped they'd just work after a few hours of setup. Three weeks absolute max.

Then you discover unmaintained dependencies are the least of your worries.

Try Urlbox instead Discover all features →

- Security**
Running headless browsers in production on your own network is not for the faint hearted. You don't let random people use a web browser on your company network do you? Server side request forgery (SSRF) is the tip of the iceberg of vulnerabilities.
- Maintenance**
Headless browsers/Puppeteer instances are extremely resource intensive. Requests freeze, processes crash and constantly need rebooting Do your SRE engineers appreciate the new source of Pager Duty notifications? Browsers were not built for server environments - they need constant care and attention.
- Edge Cases**
You will be amazed by all the weird and wonderful ways HTML & CSS renders in various server-side scenarios. Do you miss the joys of debugging CSS like it's 2003? These kinds of issues provide a never ending list of distractions from your core product.

Then you discover unmaintained dependencies are the least of your worries.

intensive. Requests freeze, processes crash and constantly need rebooting. Do your SRE engineers appreciate the new source of Pager Duty notifications? Browsers were not built for server environments - they need constant care and attention.

Edge Cases

You will be amazed by all the weird and wonderful ways HTML & CSS renders in various server-side scenarios. Do you miss the joys of debugging CSS like it's 2003? These kinds of issues provide a never ending list of distractions from your core product.

Costs

Many rendering issues can be resolved with more memory, more CPU, longer timeouts and (increasingly) some GPU too. That's no problem in your dev environment. In production, and especially when using serverless, it's another story. The bills can grow faster than developers' salaries.

“It would have been so cumbersome to implement a service of our own to take screenshots.”

Matthias Wagner, CEO Flux

ENTERPRISE GRADE WEBSITE SCREENSHOTS

Imagine Spending A Decade Perfecting A Screenshot API?

Finally you'd be free from all those distractions to focus on your core product.

[Try for free](#)

[Discover all features](#) →

Improved Security Posture

Headless browsers completely isolated from your network. No data stored on infrastructure you don't control. Penetration tests and certifications pass with flying colors.

Truely Low Maintenance

Globally distributed, self-healing Kubernetes clusters with autoscaling and monitoring. A stable dependency tree you're comfortable with from top to bottom. A status page with a steady stream of good news.

Edge Cases Covered

Your team relishes the challenge of resolving new rendering glitches when they're discovered. They're experts in the nuances of font rendering on Linux. They eagerly anticipate the release of every new browser version and set of emoji glyphs.

Costs Optimized

You've found the perfect balance of cost and performance. You can predict your server bill to the penny for every batch of 1,000 screenshots rendered.

browser version and set of emoji glyphs.

Costs Optimized

You've found the perfect balance of cost and performance. You can predict your server bill to the penny for every batch of 1,000 screenshots rendered.

“Urlbox’s API is so straightforward, and the live preview is cool. I can play around with the parameters and see it do what I need it to do.”

 Matthias Wagner, CEO Flux

WEBSITE SCREENSHOT API

A Screenshot API You Can Depend On.

A single API call to screenshot any URL or chunk of HTML.

Generate PNGs along with with fully hydrated HTML, markdown and metadata. Over 100 rendering options including custom JS. Wide format support including HTML, SVG, CSS & JS to image, PDF or video.

Get renders like they're straight from your designer.

EXAMPLE CODE

By Developers, for Developers

Ruby, Python and PHP developers depend on Urlbox to deliver fast, accurate screenshots, every time.

More recently they've been joined by developers using Clojure, Elixir, .NET, Classic ASP and all the flavours of JavaScript you can imagine.

 Copy

```
1 // npm install urlbox --save
2
3 import Urlbox from 'urlbox';
4
5 // Plugin your API key and secret
6 const urlbox = Urlbox(YOUR_API_KEY, YOUR_API_SECRET);
7
8 // Set your options
9 const options = {
10   url: 'github.com',
11   thumb_width: 600,
12   format: 'jpg',
13   quality: 80
14 };
```

Node.js Ruby PHP Python Java C#

[See documentation](#) →

MULTIPLE REQUEST METHODS

Use it Your Way

[Read the docs](#) →

Sync or Async

POST requests can receive responses asynchronously by polling or using a webhook. This allows you to render multiple screenshots in parallel. Using a POST request, you can also receive the response synchronously, which makes integration with no-code services seamless.

```
1 // npm install urlbox --save
2
3 import Urlbox from 'urlbox';
4
5 // Plugin your API key and secret
6 const urlbox = Urlbox(YOUR_API_KEY, YOUR_API_SECRET);
7
8 // Set your options
9 const options = {
10   url: 'github.com',
11   thumb_width: 600,
12   format: 'jpg',
13   quality: 80
14 };
15
16 const imgUrl = urlbox.generateRenderLink(options);
17 // https://api.urlbox.io/v1/YOUR_API_KEY/TOKEN/jpg?url=github.co
18
19 // Now set it as the src in an img tag to render the screenshot
20 <img src={imgUrl} />
```

GET or POST Request

GET requests (aka Render Links) work synchronously and allows you to configure your screenshot directly inside it's URL. You can also use a POST request to call the API synchronously or asynchronously along with a large HTML payload.

JSON or Binary Data

Calling the API synchronously via GET request, you will always receive the binary image data, so you can directly include the request URL inside your img tags. Using POST requests, you will receive a JSON blob containing the screenshots URL and (optionally) URLs to metadata, markdown text and fully-hydrated HTML.

FULL CONTROL

Screenshots without the Stress

With over 100 options Urlbox has more image rendering control than you'll ever need. Focus on the things that really matter.

Responsive Screenshots

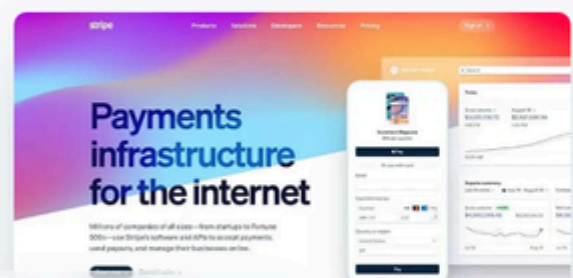

Screenshot your website at different widths and heights to simulate different devices and situations.

Full Page Screenshots

Go beyond the limits of a browser's viewport and capture everything in an HTML document.

Element Screenshots

Only need one part of a page? Capture just the element you need with a CSS selector.

```
1 const options = {
2   url: 'stripe.com',
3   width: 1440,
4   height: 1080
5 }
```

Full Page Screenshots

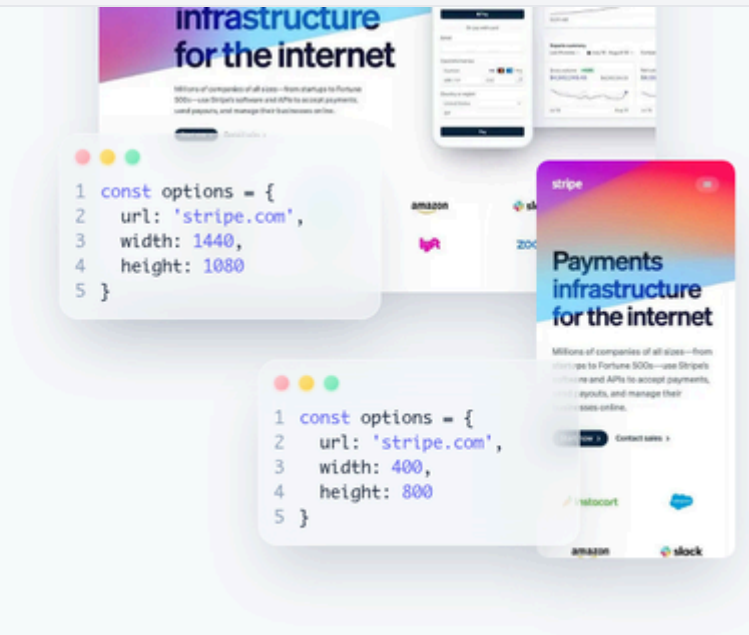

Go beyond the limits of a browser's viewport and capture everything in an HTML document.

ABOUT URLBOX

Frequently Asked Questions

If anything's not clear we're here to help. Email via support@urlbox.com or use the [chat widget](#) in the bottom right corner. We'll try to get back to you within a few minutes and you'll always hear back from us within one working day.

What counts as a Successful Render?

Unlike other APIs we don't charge for requests that fail for any reason. This happens when a web page is unavailable or the combination of options sent to us is not valid. A Successful Render is one that results in an image being returned to you.

Do you cache screenshots?

Yes, we cache screenshots for 30 days when generated with Render Links. You can override this setting via the TTL parameter or use the force option to override a previously cached screenshot.

Do requests to cached screenshots count against the monthly quota on the plan?

No. Only screenshots that are being rendered for the first time or via our REST API count against the quota.

What happens if I go over my quota?

No need to worry - we won't cut off your service. We'll automatically upgrade you to the next tier and you benefit from volume pricing. See the pricing page for more details.

Do you send alerts when I am breaching or close to going over my monthly quota of screenshots?

We sure do. We will send you an email when you are at 80%, 90%, and 100% usage.

Do you offer Service Level Agreements / guarantees for uptime and screenshot processing time?

Yes. Please get in touch to discuss our Business or Enterprise plans

Why don't you offer a free plan?

We primarily serve revenue generating businesses ranging from single freelancers, bloggers and startups all the way to established businesses and enterprises. These customers depend on us to continue operating sustainably as we have done for over a decade.

I really want to use you guys, but I just can't afford the service right now!

We've worked to make our plans as affordable as possible while keeping our business sustainable. The annual Lo-Fi plan works out at just over \$4/month. If that doesn't work for you, please get in touch to tell us about your project. We'll see if we can work something out.

Where do screenshots get stored?

We use Google Cloud Storage to store screenshot images. If you're on the Hi-Fi plan or above, you can choose to save screenshots to your own Amazon S3 bucket. The Ultra plan and above supports any S3-compatible storage provider.

Your service sucks - I want my money back!

No need to worry - we won't cut off your service. We'll automatically upgrade you to the next tier and you benefit from volume pricing. See the pricing page for more details.

Do you send alerts when I am breaching or close to going over my monthly quota of screenshots?

We sure do. We will send you an email when you are at 80%, 90%, and 100% usage.

Are my credit card details safe?

Yes. We never store or transmit your credit card details to our servers. We outsource all of the payment and subscription handling to our payment processor, Stripe.

Do you offer any support?

Of course! Feel free to try our first-class service out. We generally respond to any queries via email within the same day, and we aim to resolve issues within 3 working days.

Where do screenshots get stored?

We use Google Cloud Storage to store screenshot images. If you're on the Hi-Fi plan or above, you can choose to save screenshots to your own Amazon S3 bucket. The Ultra plan and above supports any S3-compatible storage provider.

Your service sucks - I want my money back!

We will work with you to ensure our product meets your needs. Please help us make it better by letting us know what we can do to improve. If you're still not satisfied after 30 days you can have your money back.

How do I cancel my subscription?

It's easy to cancel - just log in to the dashboard to cancel your subscription. Your account will remain active until your renewal date, and after that you will no longer be charged.
